

MUHAMMAD HAMZA JAVAID

Technical Lead | Full Stack & Frontend Architect (Angular · React · Java · Node.js)

Lahore, Pakistan · +92-303-0842792 · JavedHamza361@gmail.com · linkedin.com/in/muhammad-hamza-javid-5a08b421b

PROFESSIONAL SUMMARY

Full Stack Technical Lead with 6+ years of experience building and architecting enterprise-grade web applications across Fintech, Banking, Event Management, and Humanitarian sectors. Deep expertise in Angular (v8–v20) as a primary frontend stack, with hands-on experience in React and Node.js, and strong backend foundation in Java with Hibernate and Spring Boot. As a Technical Lead, I guide teams of 4–6 engineers through sprint planning, architecture decisions, and end-to-end delivery — combining technical depth with clear communication to translate complex business requirements into robust, scalable solutions. Known for fast delivery cycles, production ownership, and engineering standards across the team.

TECHNICAL SKILLS

Frontend	Angular 8–20, React, TypeScript, RxJS, NgRx, Standalone Components, SCSS, HTML5, PrimeNG, Angular Material
Backend	Java, Hibernate, Spring Boot, Node.js, REST APIs, JWT Authentication, MySQL
Architecture	Standalone component patterns, HTTP interceptor layer, lazy loading, modular monorepo, micro-frontend design, Angular migrations
Cloud & DevOps	AWS (EC2, S3, RDS, CloudFront), Git, GitHub, GitLab CI/CD, Datadog
AI Dev Tools	Claude Code, Cursor AI
Tools	JIRA, Postman, Swagger, WebStorm, Apache NetBeans, ESLint, Confluence
Methodology	Agile / Scrum — sprint planning, grooming, tasking, team lead, retrospectives

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Technical Lead — Frontend | Digitify Pakistan Limited – YAP Mobile Wallet Dec 2023 – Present · Lahore

YAP Pakistan Admin Portal | Angular 17 → 20 | Fintech / Digital Banking | Mar 2024 – Present

Full-featured admin platform for a digital banking super-app managing customer accounts, cards, transactions, compliance, onboarding, and system configuration in a live fintech production environment.

- As Technical Lead, architected and built the YAP Pakistan Admin Portal entirely from scratch, leading a team of 4–6 engineers and delivering 32 modules covering the full customer lifecycle — onboarding, account management, compliance, transactions, and system configuration.
- Drove the portal from zero to first production release within 3–4 months, establishing architecture standards, development conventions, and code review processes adopted by the entire team.
- Portal currently manages 10,000+ active users across 22,000+ total records (active, pending, and rejected) in a live fintech production environment.
- Designed and implemented a layered frontend architecture: Standalone Components (UI layer) → HTTP Services Layer (API calls, request/response mapping) → HTTP Interceptor (JWT attach, token refresh, global error handling), with an Injectable NgRx State Store feeding back into the UI.
- Led the Angular 19 → 20 migration as Technical Lead: audited breaking changes, updated module structure, enforced new control flow syntax (@if, @for), and ensured zero regression across all 32 modules.
- Implemented proxy configurations, route guards, role-based access control, and ESLint standards to maintain a secure, consistent, high-quality codebase across the team.

- Own production support — triaging and resolving incidents end-to-end using Datadog for monitoring, with fast hotfix turnaround maintaining high system reliability.
- Lead all sprint ceremonies: grooming, tasking, effort estimation, and delivery tracking in 2-week Agile cycles; manage team workload and unblock engineers day-to-day.
- Drive technical business domain discussions with stakeholders, translating fintech and compliance requirements into clear, implementable frontend solutions.

MATW Humanitarian Platform | Angular | Non-profit / Humanitarian Aid | Dec 2023 – Feb 2024

Global donation and impact platform supporting underprivileged communities worldwide, handling multi-currency transactions and real-time contribution tracking across multiple regions.

- Built dynamic modules (Quick Donate, Ali Banat, Contact Us, FAQs) with Strapi CMS integration enabling non-technical staff to manage content independently.
- Implemented i18n for multi-language support across 5+ languages and developed regional currency calculations with country-based routing for a global user base.
- Implemented regional currency calculation engine and country-based routing for compliance with regional financial regulations.
- Delivered the full platform within a 3-month engagement in a JIRA-driven Agile environment, meeting all sprint commitments.

Software Engineer | A J Software Private Limited Jul 2020 – Nov 2023 · Lahore

ORION & Lender | Finance & Insurance Platform | Full Stack (Angular 12 + Java + Hibernate) | Australian Fintech | Jul 2020 – Nov 2023

Two interconnected enterprise fintech platforms for the Australian market — ORION (broker & insurance) and Lender (loan assessment & compliance) — handling the full loan lifecycle from application to settlement, used by financial institutions to automate complex regulatory workflows.

- Worked as a full stack engineer on ORION, a comprehensive Australian fintech platform for loan assessment, financing, and compliance — building features end-to-end from Angular frontend through to Java/Hibernate backend.
- Developed and owned multiple modules end-to-end: Point of Sale, Loan Assessment System, Settlement Management, Contract Modification, and System Administration.
- Built and maintained REST APIs in Java with Hibernate ORM, handling complex data models for loan lifecycle management, payment calculations, and compliance reporting.
- Implemented NgRx with Publisher/Subscriber architecture on the frontend for centralized state management, significantly reducing UI state bugs across the platform.
- Integrated Finance module for multi-method payment calculations; built Quote and Dashboard modules using Wijmo Flex and Google Charts.
- Handled PDF generation, styles, and data binding via XSLTs; integrated Grape City spreadsheets for Income, Asset, Expense, and Liabilities reporting.
- Built 3 independently deployable micro-applications within a unified workspace: Lender Portal, Broker Portal, and Insurance Management module.
- Wrote multiple stored procedures for complex loan data queries and compliance reporting workflows.
- Executed Angular version migrations across both platforms to latest stable versions with zero production downtime.
- Delivered compliance-aligned loan lifecycle features meeting Australian regulatory requirements, working closely with domain experts throughout.

LIFE — Event Management Platform | Full Stack (React + Node.js) | Jul 2021 – Dec 2021

A full stack event management platform enabling clients to plan, organize, and track personal events such as birthdays, weddings, and social gatherings.

- Built LIFE, a full stack event management platform enabling clients to plan, organize, and track personal events such as birthdays, weddings, and social gatherings.
- Developed the complete frontend in React — building reusable component library, event listing and detail views, client dashboards, and RSVP management workflows.

- Engineered the Node.js backend: designed and implemented RESTful APIs, handled event scheduling logic, client notifications, and data persistence with MySQL.
- Delivered the application end-to-end independently, gaining hands-on experience across the full JavaScript stack (React + Node.js) alongside the primary Java/Angular work.

Associate Software Engineer | A J Software Private Limited Jun 2019 – Jun 2020 · Lahore

VIRM & CMS — Vehicle Insurance & Claim Management | Angular 8 | Australian Government Insurance | Jun 2019 – Jun 2020

Two government-grade insurance platforms for the Australian market — VIRM (Vehicle Insurance Registration Management System) for vehicle policy registration and lifecycle management, and CMS (Claim Management System) for end-to-end accidental claim processing and compliance.

- Developed and implemented multiple Angular frontend components across VIRM — covering vehicle registration flows, policy management views, renewal processing, and admin dashboard interfaces.
- Built view-layer components for CMS covering the full insurance claim lifecycle: claim submission forms, assessor assignment workflows, status tracking dashboards, and resolution management screens.
- Implemented reusable UI components, form validations, and REST API integrations for both platforms, building foundational expertise in Angular component-driven architecture and RxJS reactive patterns.
- Worked with Bootstrap, Angular Material, MySQL, AWS (RDS/S3/EC2), WildFly application server, and JWT-based authentication across both government platforms.
- Operated in an Agile delivery environment using JIRA and Confluence, collaborating with a cross-functional team of developers, QA, and domain experts on compliance-critical insurance workflows.

KEY ACHIEVEMENTS

- Led a team of 4–6 engineers to build a 32-module fintech admin portal from greenfield to production in 3–4 months — now live managing 22,000+ user records.
- Promoted from Software Engineer to Technical Lead at Digitify based on delivery performance, architectural ownership, and team leadership on the YAP portal.
- Executed Angular 19 → 20 migration with zero regression across a large-scale production codebase — all 32 modules updated and validated.
- Delivered full stack features end-to-end on ORION — a complex Australian fintech platform — across both Angular frontend and Java/Hibernate backend.
- Built and shipped LIFE event management platform as full stack engineer using React and Node.js, demonstrating cross-stack versatility beyond primary Angular expertise.
- Delivered the MATW humanitarian platform with 5+ language support and regional currency routing within a 3-month engagement.
- Built government-grade Angular frontends for VIRM (Vehicle Insurance) and CMS (Claim Management) — two Australian compliance platforms — at the start of career.

EDUCATION

Bachelor of Science — Computer Science

2015 – 2019

University of Management & Technology (UMT), Lahore
